**Australians not willing to ‘just believe’**

As part of the Australian Survey of Social Attitudes in 2009, people across Australian communities were asked to respond to the statement “I think we should just believe and not question our beliefs”. The findings reveal that only a minority take a dogmatic approach to beliefs.

### Agree or disagree: “I think we should just believe and not question our beliefs”

Source: 2009 Australian Survey of Social Attitudes.

Critical reflection and questioning are significant components of contemporary Australian spirituality. Nearly half of respondents (49%) think that we should question our beliefs. In fact, one in five (20%) strongly oppose the idea of ‘just believing’.

The Oxford Dictionary defines being dogmatic as “inclined to lay down principles as undeniably true”. A preference for accepting one’s beliefs without critical engagement is true for a minority of Australians who have the view we should ‘just believe and not question our beliefs’ (20%). Within that group only 4% strongly agree.

Around a third of Australians are neutral or undecided on this issue.

**INSIDE...**
- Men more inclined to question
- Young and questioning
- More education, more questioning
- Australian-born less decisive
- The religious who ‘just believe’
- Religious does not mean dogmatic
Agree or disagree: “I think we should just believe and not question our beliefs”

**Sex:** More than half of all men (54%) think we should question our beliefs, compared with 44% of women.

The willingness to question beliefs seems more evident in men (24% strongly disagree with ‘just believing’ vs 15% of women).

Both men and women express a clear tendency towards questioning and critical reflection.

More women are neutral or undecided about this issue than men (35% vs 27%).

**Age:** A dogmatic, unquestioning approach to one’s beliefs is more common among the oldest age group of Australians.

Those aged 70 and over are more likely than others to affirm a non-questioning belief. For example, 10% of people aged 70+ strongly agree that we should ‘just believe’, compared with 3-4% of other age groups.

People aged 50-69 had the highest proportion opposed to ‘just believing’ (57% disagree or strongly disagree) followed closely by 15-29’s (50%), 30-49’s (45%) and lastly 70+ (34%).

Indecision was most evident among younger people, with 37% of 15-29 year olds who neither agree or disagree compared to 27% of 50-69’s and 29% of those aged 70 and over.

**Education:** Being willing to question and reflect on beliefs is associated with higher levels of education.

University-educated persons are more likely to disagree or strongly disagree with ‘just believing’. The proportion who don’t think we should ‘just believe’ decreases from 75% of postgraduates to 53% of those with a certificate, diploma or trade qualification, and 37% of those with a high school education.

Across most educational groups, larger proportions are neutral or undecided, rather than dogmatic.
Agree or disagree: “I think we should just believe and not question our beliefs”

Ethnicity: A similar proportion of people express a preference to question their beliefs, regardless of their place of birth (49% of those born in Australia and those born overseas).

However the preference to ‘just believe’ exists more strongly in those born overseas with 9% strongly agreeing that we should ‘just believe’, as opposed to just 3% of those born in Australia.

Those born in Australia are slightly more undecided in their opinion, when compared with those born overseas (33% vs 25%).

Religion: People who describe themselves as having a religion are much more likely than those with no religion to have a non-questioning approach to belief.

Some 29% say we should ‘just believe’ vs 9% of non-religious people.

Not surprisingly, those who describe themselves as not religious strongly reject the idea that we should just believe (59% vs 41%). In fact their strength of conviction is very clear in that some 30% of non-religious people strongly disagree with ‘just believing’, in contrast to 12% of those with a religion.

A similar proportion of both groups are neutral or undecided (30% religious, 33% non-religious).

Attendance: More church attenders are willing to question their beliefs, than to be dogmatic. This is regardless of how often they attend religious services. Even among those who attend weekly or more, 44% prefer to question versus 33% who ‘just believe’.

Australians who never attend church have the highest proportion who do not accept an unquestioning approach to beliefs (53% vs 14% who just believe).

Uncertainty is high among infrequent and non-attenders (33%) than among more frequent attenders (23-25%).
AUSTRALIAN SPIRITUALITY RESOURCES
from NCLS Research

Available online
www.ncls.org.au/spirituality

Fact Sheets:
• Something beyond this life
  explores whether Australians believe in a spiritual
dimension to life
• Just believe or question
  examines the degree of critical reflection in religious faith
  and spiritual beliefs of Australians
• Philosophies of life
  identifies which philosophies of life have most influence on
  how Australians live today
• Guided by faith
  examines the saliency of religious faith or spirituality in
  shaping life’s decisions, such as career, relationships and
  lifestyle
• Jesus’ resurrection
  reviews Australian beliefs about whether Jesus
  resurrection was an actual historical event

Each Fact Sheet presents the overall results for Australia and
then compares different groups including: sex, age, education,
ethnicity, ‘having religion’ and church attendance.

Data source:
The International Social Survey Program
(ISSP) is an ongoing survey designed to
monitor changes in society across a
range of countries. In 2009 the ISSP
was undertaken in Australia by the
Australian National University via the
Australian Survey of Social Attitudes
(AuSSA).

The survey included a standard
component on religion, as well as
customised questions regarding religion
and spirituality which were commissioned
by a consortium that included NCLS
Research.

The sample comprised 1718 adults
across Australia.

COMMUNITY SPIRITUALITY link to the
2011 NATIONAL CHURCH LIFE SURVEY

Find out about the spiritual beliefs of people who connect
with your church but don’t attend regularly.

A new addition to the 2011 NCLS and beyond is a survey of
local church contacts. Churches can survey people they have
contact with, whether through a play group, soup kitchen, or
someone they are related to.

It’s an effective way to find out about the beliefs, faith practices
and spirituality of those connected with your church, as well as
what they think of your activities. This will help your church build
stronger connections and serve the community more effectively.
